

Every feature is a responsibility.

What rebuilding a community website from 1997 taught me
about technology decisions.

Twenty-nine years of history. Hard to find from search.

RevereBeach.com, December 2025. A trusted name, a blog carrying the updates, few events making it onto the site, and archives search rarely surfaced.

Same address.
Rebuilt from the ground up.

A banner for the Revere Beach website. The background is a photograph of a beach scene with a large, ornate clock tower in the foreground on the right, a beach pavilion in the middle ground, and the ocean in the background. The sky is clear and blue. The website's navigation bar is at the top, and the main headline is on the left side of the banner.

AMERICA'S FIRST PUBLIC BEACH. ESTABLISHED 1896.

Revere Beach, where Boston meets the Atlantic.

Come for the shoreline. Stay for the stories, local flavor, landmark events and generations of history that make this stretch of coast unmistakably Revere.

EXPLORE UPCOMING EVENTS

PLAN YOUR BEACH DAY

REVERE, MASSACHUSETTS · MINUTES FROM DOWNTOWN BOSTON

What it needed wasn't a facelift.

Business directory → built new, 588 listings

Events → a real calendar, with a submission process that gets events on the site

News and community → the blog rebuilt as a feed, with approval

Search → internal site search, and history restructured so Google can find it

Ownership → analytics, accessibility, security, and who keeps each current

Experience Revere Beach.

Find the places locals know, the landmarks visitors remember and the businesses that keep the beach community moving.

588 listings.

Who keeps them accurate?

A directory is only useful if people can find it and trust what's in it.

An events calendar is a commitment.

Events used to stall in the process. Now there is a submission flow, an approval step, and a calendar that stays current.

The front door won't tell you everything.

It will tell you where to start looking.
